

Nebulizer Market is estimated to be US\$ 2.29 billion by 2030 with a CAGR of 6.8% during the forecast period

Nebulizer is small machine that turns liquid medicine into a mist. It is a type of breathing machine that lets you inhale medicated vapors. While not always prescribed for a cough, nebulizers may be used to relieve coughs and other symptoms caused by respiratory illnesses. They're especially helpful for younger age groups who may have difficulty using handheld inhalers. Nebulizers are commonly used by the patients suffering from asthma, chronic obstructive pulmonary disease (COPD), cystic fibrosis, and other respiratory diseases or disorders. Nebulizers directly target the respiratory area decreasing side effects and harm to other body organs and cells. Thus, it is much comfortable to use than other forms of ingested medicines. Growing incidence rate of chronic respiratory diseases, increasing demand for home healthcare devices, and rising geriatric population is leading to boost growth of the target market globally.

Region Analysis:

In the nebulizers market, North America accounted largest revenue share of the market due to increasing respiratory disorders and efforts by the government such as favorable reimbursement scenario, well-established healthcare infrastructure, and growth in customer awareness. Additionally, favorable reimbursement scenario and introduction of technologically advanced devices in this region are anticipated to propel the market growth in this region.

Key Development:

- In July 2020, Omron Healthcare the leading Japanese player in the home healthcare monitoring segment had announced addition of a new entrant to their compressor nebulizer portfolio- OMRON NE C106.
- In June 2020, Respira technologies launched pharmaceutical-focused commercial development program for its RespiRx drug-delivery device platform. RespiRx is a portable, handheld vibrating mesh nebulizer designed for local and systemic treatment and can operate in any position held by the patient.
