

## **Automotive Cooler Market is estimated to be US\$ 3391.85 million by 2032 with a CAGR of 5.4% during the forecast period 2032**

Automotive Cooler Market accounted for US\$ 2011.8 million in 2022 and is estimated to be US\$ 3391.85 million by 2032 and is anticipated to register a CAGR of 5.4%. An automotive cooler is an automobile window-mounted evaporative air cooler, sometimes referred to as a swamp cooler. The recent growth in the automotive cooler market can be attributed to the increase in demand in the automotive industry. An air cooler is used to cool the compressed air before it enters the intake manifold or combustion chambers of the engine. The air compressed by the turbocharger is hotter, which reduces the density of the air resulting in less oxygen being present during combustion. A car cooler is a type of device that is used to help cool the air inside a vehicle. This type of evaporative cooler is usually mounted on one of the vehicle's windows and helps reduce the temperature of the interior using the process of evaporation. Increasing demand for vehicles and increasing average lifespan of working vehicles is likely to drive market growth as well as demand for vehicles with HVAC systems. The automotive industry is moving towards more stringent emission and fuel consumption regulations, resulting in increased demand for improved equipment to control intake air temperature. This is a major factor driving the demand for automotive charge air coolers during the forecast period.

The report **“Global Automotive Cooler Market, By Type (Plate and Fin, and Tube and Fin), By Vehicle Type (Passenger Vehicle, and Commercial Vehicle), Application (Engine Cooler, HVAC Cooler, Brake Lubricant, and Other) and By Region (North America, Europe, Asia Pacific, Latin America, and Middle East & Africa) - Trends, Analysis and Forecast till 2030 “**

### **Key Highlights:**

- In October 2022 the world's white paint reflects heat and can now be used on cars. New research from Purdue University has helped develop white paint that is 97.9 percent solar reflective, helping to keep painted objects cool. According to Zhulin Ruan, professor of mechanical engineering and the paint's developer, the paint can now be applied thinly to make it useful in automotive, aeronautical and other applications, a development of older formulations.
- October 2022, a fourth vehicle planned at Foxconn in Lordstown. Foxconn signed a deal that will allow the production of a fourth battery-powered vehicle at the Taiwanese electronics and technology giant's Lordstown Assembly plant. The interior of the vehicle uses sustainable, recycled materials and provides 43 cubic feet of cargo space behind the second row of seats. The dashboard has a 15-inch center screen for infotainment and navigation and another 15-inch screen for passengers. The center armrest houses a wireless phone charger, USB port and a small beverage cooler that fits up to four cans.

### **Analyst View:**

The cooling system is most important in a vehicle because this system is removes excess heat from the engine and it maintains the engine operating temperature where it operates most efficiently & finally it brings the engine up to proper operating temperature as quickly as possible. Increasing demand for

vehicles and reliable speculation by automakers on research and advancement of practical, cost-effective and less harmful products with high luxury life in the business is likely to drive the charge air cooler market worldwide. Global automotive cooler market innovation is increasing across the globe, due to technological developments in cooler devices and products that are more efficient to use and use. As a result, market competition is intensifying and both large international corporations and start-ups are striving to establish a position in the market.

**Key Market Insights from the report:**

Global Automotive Cooler Market accounted for US\$ 2011.8 million in 2022 and is estimated to be US\$ 3391.85 million by 2032 and is anticipated to register a CAGR of 5.4%. The Global Automotive Cooler Market is segmented based on Product Type, Process, Application and Region.

- Based on Product Type, Global Automotive Cooler Market is segmented into Plate and Fin, and Tube and Fin.
- Based on Vehicle Type, Global Automotive Cooler Market is segmented into Passenger Vehicle, and Commercial Vehicle.
- Based on Application, Global Automotive Cooler Market is segmented into Engine Cooler, HVAC Cooler, Brake Lubricant, and Other.
- By Region, the Global Automotive Cooler Market is segmented into North America, Europe, Asia Pacific, Latin America, and Middle East & Africa.

**Competitive Landscape & their strategies of Global Automotive Cooler Market:**

The prominent players operating in the Global Automotive Cooler Market includes BP P.L.C.(UK), Chevron Corporation (US), Cummins Filtration (US), Shandong Yuean Chemical Industry Co. Ltd (China), Gallay Ltd (England), Hayden Automotive (US), Calsonic Kansei Corporation (Japan), AKG Thermotechnik International GmbH & Co. KG (Germany), and Modine Manufacturing (US), Nengun.

The market provides detailed information regarding the industrial base, productivity, strengths, manufacturers, and recent trends which will help companies enlarge the businesses and promote financial growth. Furthermore, the report exhibits dynamic factors including segments, sub-segments, regional marketplaces, competition, dominant key players, and market forecasts. In addition, the market includes recent collaborations, mergers, acquisitions, and partnerships along with regulatory frameworks across different regions impacting the market trajectory. Recent technological advances and innovations influencing the global market are included in the report.
